CC SIL This sequence represents a linker that can be used in the chimeric glycosylated soluble interleukin-6 receptor (sIL-6R)-interleukin-6 (IL-6) protein (sIL-6R)-1.5 of the invention. The sIL-6R/IL-6 protein comprises a fusion protein product between all of the naturally occurring form of sIL-6R and all of the naturally occurring form of sIL-6R and all of the naturally occurring form of IL-6, the sIL-6/IL-6 and analogues being glycosylated in a similar fashin to the glycosylation of naturally occurring sIL-6R and IL-6. The sIL-6R/IL-6 and analogues are capable of inhibiting the growth of highly malignant cancer

Streptomy

The invention describes the use of interleukin-18 (IL-18) inhibitor for manufacture of medicament for treatment and/or prevention of diseases or diseased conditions of the arteries, heart failure recurrent events, or as diagnostic marker for bad cilinical prognosis in heart failure or recurrent events after first event of heart failure. The IL-18 inhibitor prevention of atheroscierosis/arteriosclerosis, the manufacture of a medicament for treatment and/or medicament for treatment and/or prevention of theorem, as therefore the plaque (AP), Ap ulcer, AP destabilisation (responsible for stroke), atheroma, is chaemic syndromes e.g. myocardial infarction, AI ischaemia, re-vascularisation and progression of atherosclerosis, where the heart failure is ischaemic or non-ischaemic and as a diagnostic
                                                                                                                                                                                                                                                                    Use of interleukin-18 inhibitor for manufacture of medicament for treatment and/or prevention of atherosclerosis, thrombosis of atherosclerotic plaque, atherosclerotic plaque ulcer and heart fair
                                                                                                                                                                                                                                    Disclosure; Page 16;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cells, e.g. melanoma cells, eliciting the in vivo engraftment of human haematopoietic cells in bone marrow transplantation and protecting liver from hepatotoxic agents. They can be used for the preparation of a medicament for treating mammalian cancers by way of inhibition of cancer cells, for enhancement of bone marrow transplantation by way of eliciting for increasing haematopoietic cells in bone marrow transplantation, for increasing haematopoiesis, for treating liver or neurological disorders, or in other applications in which IL-6 or sIL-6R are used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAU11643 standard;

The present invention relates to the use of human secreted apoptosis-
CC related protein 1 (SARP-1), SARP-1 nucleic acids and/or a substance which
CC stimulates the release or potentiates the activity of endogenous SARP-1
CC for the treatment of scleroderma. The SARP-1 protein binds to and
CC initiates signalling of the human SARP-1 receptor. The SARP-1 protein can
CC be used in protein therapy, and the polymucleotide sequences encoding
CC sequences, and pharmaceutical compositions comprising SARP-1 are useful
CC sequences, and pharmaceutical compositions comprising SARP-1 are useful
CC for the treatment of scleroderma, especially systemic sclerosis. They may
CC interstitial pulmonary fibrosis, Dupuytren's contracture, keloid and
CC contractive fibrosis), chronic heart failure (particularly after myocardial
CC infarction), disorders involving inflammation of the lung (e.g. rheumatoid
CC arthritis). The present sequence represents a linker peptide that can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              문

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to the use of a substance (I) signaling through gpl30, or use of a vector (II) for inducing and/or enhancing the endogenous production of interleukin-6 (IL-6) in a cell. (I), (II) or cell expressing (I), is useful in the manufacture of a medicament for treatment and/or prevention of diabetic neuropathy. (I) is useful for treating or preventing diabetic neuropathy such as polyneuropathy or mononneuropathy. The present sequence represents a linker peptide used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Linker peptide used in constructing

                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes a novel method for prolonging the in vivo effect of type I interferon (IFN) by administering IFN as a complex (A) with a subunit (I) of the human interferon alpha/beta receptor (IFNAR). The product of the invention has antiviral, anticancer, immunomodulatory, anti-arthritic and antidiabetic activity. (A) have the antiviral, anticancer and immunomodulating activities of IFN, e.g. for treating hepatitis and other viral infections, hairy cell leukemia, Kaposi's sarcoma, multiple myeloma and other cancers, multiple sclerosis, rheumatoid arthritis, myasthenia gravis, diabetes, acquired immune deficiency syndrome and lupus. When complexed in (A), the storage life of IFN is increased (i.e. it is stabilized against oligomerization, without the need for storage at acidic pH) and its biological effect is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               IFNAR2; IFN-beta; type I interferon; IFNAR/IFN complex; IFN; antiviral; human interferon alpha/beta receptor; anticancer; immunomodulatory; anti-arthritic; antidiabetic; treatment; hepatitis; viral infection; hairy cell leukemia; Kaposi's sarcoma; multiple myeloma; cancer; lupus; diabetes; multiple sclerosis; rheumatoid arthritis; myasthenia gravis; acquired immune deficiency syndrome.

The product of the invention has antiviral, anticancer, immunomodulatory, anticancer and immunomodulating activities of IFN, e.g. for treating hepatitis and other viral infections, hairy cell leukemia, Kaposi's sarcoma, multiple myeloma and other cancers, multiple sclerosis, rheumatoid arthritis, myasthenia gravis, diabetes, acquired immune deficiency syndrome and lupus. When complexed in (A), the storage life of IFN is increased (i.e. it is stabilized against oligomerization, without the need for storage at acidic pH) and its biological effect is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diabetes; multiple sclerosis; rheumatoid arthritis; myasthenia gravis; acquired immune deficiency syndrome.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to Pseudomonas aeruginosa polypeptides and the polymucleotides encoding them. The sequences are useful in diagnosts and continuous as molecular targets for diagnostics, corophylaxis and treatment of pathological conditions resulting from a coronary for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, coincluding anti-P. aeruginosa drugs, as templates for recombinant components for diagnosis and/or treatment of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused components for diagnosis and/or treatment of P. aeruginosa-sequences AB667826-CC AB084396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAY36754-Y37949 are encoded by open reading frames (ORFs) of the genome of Chlamydia trachomatis (see AAZ01425). The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, and inclusion conjunctivitis, genital diseases such as nongonococcal uretritis, epidymitis, cervicitis, salpingitis, perihepatitis, bartholinitis; pneumopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention may be
                                                        The invention relates to a unicellular organism for producing a diterpene or diterpene precursor comprising an exogenous nucleic acid sequence encoding a geranylgeranyl pyrophosphate synthase under the control of a promoter operable in the organism, and an exogenous nucleic acid sequence encoding a diterpene synthase under the control of a promoter operable in the organism. The invention also relates to methods of producing a the organism.
                                                                                                                                                                                                                                              New unicellular organisms comprising exogenous nucleic acids encoding geranylgeranyl pyrophosphate and a diterpene synthase, useful for producing diterpenes and diterpene precursors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          07-JAN-2002; 2002US-00041018
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Chlamydia trachomatis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0
```

The invention relates to multiprotein complexes from eukaryotes. Proteins of the invention and DNA sequences encoding them are given in records ABR52568-ABR53903 and ACC60610-ACC61944 respectively. The complexes are obtainable by using a protein as a bait and isolating the set of proteins which is attached thereto from cells. Such protein complexes may comprise up to 30 distinct proteins. Protein complexes of the invention are useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of a disease or disorder. Note: The sequence data for this

New isolated protein complexes useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of diseas

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    888888888888888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the cells further comprises at least one isolated and purified nucleic CC acid sequence of a yeast expression library, and the expression of the nucleic acid sequence is regulated by an inducible promoter under conditions where the expression is induced, filtering the cell/resin conditions where the expression is induced, filtering the cell/resin mixture with alcohol to produce an extracting the cell/resin mixture with alcohol to produce an correct condition chromatography and/or spectroscopy, to identify the nucleic acid sequence encoding the diterpene synthase. The unicellular conditions is useful as a diterpene or diterpene precursor producing system. Diterpenes, in plants, serve as defence toxins, volatile confensive signals, pollinator attractants and photoprotectants. This sequence represents a geranylgeranyl pyrophosphate synthase polypeptide of the invention. Note: The sequence data for this patent did not form the printed specification but was obtained in electronic formations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                       conditions. The protein complexes are useful as targets for an active agent of a pharmaceutical. These protein complexes are particularly useful as drugs targets for the treatment or preventing of a disease or disorder. The complexes and methods above are useful in diagnosing or screening for the presence of a disease or disorder or a predisposition for developing a disease or disorder in a subject. These are also useful in screening for a drug for treatment or prevention of a disease or disorder. The molecule that modulates the amount, activity or protein components of the complex is useful for the manufacture of a medicament for the treatment or prevention of a disease or disorder. This sequence corresponds to a protein of the invention. (Note: the sequence data for this patent did not form part of the printed specification but was obtained from the EPO in electronic format).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    second protein, or its derivative, fragment, homologue or variant. The proteins are selected from given protein complexes, which are not defined in the specification. The variants are encoded by nucleic acids that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New proteins and protein complexes from eukaryotes, useful as targets drug screening, or in diagnosing or screening for the presence of a disease or disorder, or a predisposition for developing a disease or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 623
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office. The complete document is available on CD-ROM

                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                    The invention relates to Pseudomonas aeruginosa polypeptides and the polynuclectides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa drugs, as templates for recombinant components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology.                                S
                                                                                                                                                                 treating an individual suffering from a mycobacterial infection, consuperted of being infected with a Mycobacterium, or having been exposed to an infectious Mycobacterium. It is also useful for identifying and isolating mutants of actinomycetales and for identifying compounds that have antibiotic activity. The method is used to identify mutants of microorganisms, preferably an actinomycetales, such as M. tuberculosis, M. bovis, M. leprae, M. avium, M. intracellulaire and M. paratuberculosis, that is unable to grow under specific conditions. It is especially useful for identifying loci involved in pathogenicity. It is useful in constructing vaccines. The method can be used to screen conditiple libraries concurrently. It can screen libraries of different organisms or different strains of the same organism. The present protein is encoded by a gene which is disrupted by the insertion of the IS 1096 transposon to produce an attenuated mutant of Mycobacterium tuberculosis
                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Mycobacterium tuberculosis; attenuated microorganism; mmpL7; Rv2942; signature tagged transposon mutant; mutant library; mycobacterial infection; actinomycetales; antibacterial; immunostimulant;
                                                                                                                                                                                                                                                                                                                                                                                                                     library with insertions in genes and/or regulatory regions of the organisms of interest, where the insertion contains a tag and/or a transposon associated with a tag. The mutants are identified by hybridisation of the tags to known sequences. The method is useful for hybridisation of the tags to known sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gicquel B,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               06-JUL-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is transmembrane transport protein MMPL7. It is encoded by a gene which is down-regulated during survival under carbon starvation and oxygen limitation conditions. The specification describes mycobacterial genes which are down-regulated during a stationary phase culture of mycobacteria under nutrient-starving culture conditions, when compared with an exponential phase culture of mycobacteria under culture conditions that are not nutrient-starving and that support exponential growth of the mycobacteria. Mycobacterial polypeptides which are down-regulated under nutrient-starving conditions are useful for the manufacture of a medicament for treating or preventing a mycobacterial infection. They may also be useful as vaccines

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            pustulosis, hypertosis and osteomyelitis), weitts and endophthalnitis.

CP. acnes is also involved in infections of bone, joints and the central CP. acnes is also involved in infections of bone, joints and the central CP. acnes is sparticularly involved in the inflammatory construction associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a compression of a binding agent that binds to the proteins of the invention of and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as characteristic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for obtained in electronic format directly from WIPO at Cpub/pub/pub/lished per sequence.

The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.

                                                                                                                                                                                                                                                                                                                                 δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC rhe invention relates to an isolated polynucleotide (ACF64435-ACF64733)
CC encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64336) and to CC polypeptides encoded by the polynucleotides. The invention and to CC immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a CC polynucleotide of the invention; antibodies against polypeptides of the cinvention; a composition of the invention; a composition of comprising P calls prepared composition (comprising P calls prepared composition (comprising P calls prepared complete the composition of the polynucleotides, and a composition of comprising P cacnes polypeptides, complete the polypeptides, or composition of the polynucleotides and kit composition of the cacnes in a complete composition of the cacnes in a composition of the cacnes of P. acnes in a complete composition of the cacnes of proteins, T cell populations or antigen-presenting cells that express the colypeptides are useful for diagnosing, preventing or treating acnes composition. The polynucleotides can also be used as probes or primers for complete caches and the caches proteins. The caches can also be used as probes or primers for complete caches and the kit is useful for performing a diagnostic assay. The present composition is useful for the caches composition is useful for the caches composition assay. The present composition is useful for the present of the printed specification, but was obtained in electronic format directly form mart of the printed specification, but was obtained in electronic format directly composition in the present of the composition in the present of the composition in the present of the composition 
                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC The invention relates to Pseudomonas aeruginosa polypeptides and the CC polynucleotides encoding them. The sequences are useful in diagnosis and CC therapy of pathological conditions, as molecular targets for diagnostics, CC prophylaxis and treatment of pathological conditions resulting from a CC bacterial infection, for evaluating a compound, such as a polypeptide, CC for the ability to bind a P. aeruginosa nucleic acid, as components of CC effective antibacterial targets, as targets for antibacterial drugs, CC including anti-P. aeruginosa drugs, as templates for recombinant CC production of P. aeruginosa-derived peptides or polypeptides, as target CC components for diagnosis and/or treatment of P. aeruginosa-caused CC infection, and in detection of P. aeruginosa sequences or ther sequences of Pseudomonas species using biochip technology. Sequences ABO67826-CC ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed CC specification but was obtained in electronic format from USPTO at Sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ફ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              문

The invention relates to an isolated polynucleotide (ACF64435-ACF64733) CC encoding a Propionibacterium acnes protein. The invention also relates to computation and to immunogenic fragments of p. acnes polypeptides. The invention computation and thodies against polypeptides of the invention, antibodies against polypeptides of the invention; a method for stimulating an immune response specific for a p. acnes polypeptide and an isolated T cell population comprising P. acnes polypeptides, completely antipodies, fusion proteins, T cell populations, or computation comprising P. acnes polypeptides, comparison proteins, T cell populations, or contain an method for inhibiting the development of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a composition comprising proteins, or composition of proteins, T cell populations or antigen-presenting cells that express the polypeptides, antibodies, fusion proteins, or for stimulations or antigen-presenting creates the patient, and a method for inhibiting the development of P. acnes in a patient, and a method for inhibiting the development of P. acnes in a composition, and the composition of an immune response specific for a p. acnes the polypeptides are useful for diagnosing, preventing or treating acnes composition, in the polyment of an immune response against P. acnes, or for treating acne, and the kit is useful for performing a diagnostic assay. The present composition is useful for the printed specification, but was contain an immunogenic region. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB018737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly the sequences of the sequence data for this patent did not format directly appropriate of the sequence data for this patent did not format directly the sequence data for this patent did not format directly the sequence data for this patent did not format directly the sequence data for this patent did not format directly the sequence data for this patent did not format directly the sequence data for this patent did not format directly the sequence data for this patent did not format directly the sequence data for this patent did not format directly the sequence data for this patent did not format directly the sequence data for this patent did not format directly the sequence data for this patent did not format directly the sequence data for this patent did not format directly the sequence data for the sequence data for this patent did not format directly the sequence data for the sequence data for this patent did not format directly the sequence data for this patent did not format directly the sequence data for this patent did not format directly the sequence data for the sequence dat

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying a mitochondrial target for drug screening assays and for treating diseases associated with altered mitochondrial function, comprises detecting a modified polypeptide in a sample and correlating with the disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ghosh SS,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ragged red fibre syndrome (MERRF) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, antiarthritic to soteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 875 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ORFs are shown. The proteins are variously cell envelope proteins, cytoplasmic proteins, secreted proteins or other cellular proteins. Vaccines containing the nucleic acids or proteins are claimed, as are probes containing at least 8 nucleotides from the nucleic acid sequences. The vaccines are useful for treating or reducing the risk of H. pylori infections, and the probes can be used diagnostically for detecting the presence of Helicobacter in a sample. The products are also of use in screening for compounds having the ability to interfere with the H. pylori life cycle or to inhibit H. pylori infection
This sequence represents a Helicobacter pylori GHPO protein of the invention. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used for
                                                                                                                                                                                                                                                    New isolated Helicobacter polynucleotides - used to develop products for the diagnosis, prevention and treatment of Helicobacter infections and gastrointestinal diseases.
                                                                                                                                                                                               Claim 8; Page 111-113; 2054pp; English.

                                                                                                            The invention relates to a vaccine for preventing or treating infections by Helicobacter pylori. The vaccine contains at least one isolated H. pylori polypeptide, or its fragments, in a carrier, where the carrier is a Salmonella, Vibrio cholerae or Shigella vector containing a nucleic acid encoding the H. pylori polypeptide. The vaccines induce humoral and cellular immune responses. The vaccines are used to treat or prevent infections by H. pylori. Sequences AAX75779 to AAX75837 represent nucleic acid sequences encoding H. pylori outer membrane polypeptides (OMPB)
                                                                                 Sequence 220 AA;

CC The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression CC (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense CC nucleic acid; (2) a host cell containing the vector; (3) an isolated CC polypeptide or its fragment whose expression is inhibited by the antisense CC nucleic acid; (4) an antibody capable of specifically binding CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular CC proliferation or the activity of a gene in an operon required for proliferation, or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation; (8) identifying a compound that influences the activity of cor a gene on which the test compound that inhibits proliferation of a proliferation or the proliferation or the proliferation or the proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a CC compound's activity; (11) a culture comprising strains in which the gene product is overexpressed of 1(12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for cellular proliferation of an organism. The antisense nucleic acids are useful for cellular proliferation in cells other than S. aureus, S. typhimurium, CC the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained cc in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś
                                                                                                                                                                                                                                                                               The present sequence is the protein sequence of an efflux protein thought to be involved in the biosynthesis of the peptide antibiotic AC98 of CC Streptomyces hygroscopicus NS17 (NRRL 30439). The sequence is predicted CC from an open reading frame (ORP10) in a gene cluster ADE86070 isolated CC complex. Sequence comparisons of specific ORFs indicated that the encoded CC complex. Sequence comparisons of specific ORFs indicated that the encoded CC proteins are tailoring enzymes involved in modification of the AC98 CC peptide core, e.g. glycosylation, methylation or acylation, or in CC transformed host cells. It also provides a method of producing acyclic CC peptide antibiotic, such as AC98, using the NRPS comprised of mppA CC lipoglycopeptide antibiotic with activity against Gram-positive CC pathogens. Also provided are methods of modifying NRPS to produce an CC antibiotic having a modified peptide core, and a method for evaluating CC the structural regions of the modified peptide.

                                                                                                                                                                                                                                                                                                                                                            ABR52568-ABR53903 and ACC60610-ACC61944 respectively. The complexes are obtainable by using a protein as a balt and isolating the set of proteins which is attached thereto from cells. Such protein complexes are up to 30 distinct proteins. Protein complexes or disprise of the invention are useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of a disease or disorder. Note: The sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office. The complete document is available on CD-ROM
                                                                                                                   06-MAY-2004
                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; SEQ ID NO 1301; 17pp + Sequence Listing; English

The proteins are selected from given protein complexes, which are not defined in the specification. The variants are encoded by nucleic acids that conditions. The protein complexes are useful as care to the mucleic acids encoding the proteins under low stringency conditions. The protein complexes are useful as targets for an active agent of a pharmaceutical. These protein complexes are particularly useful as drugs targets for the treatment or preventing of a disease or disorder. The complexes and methods above are useful in diagnosing or screening for the presence of a disease or disorder or a predisposition for developing a disease or disorder in a subject. These are also useful in screening for a drug for treatment or prevention of a disease or disorder. The molecule that modulates the amount, activity or protein components of the complex is useful for the manufacture of a medicament for the treatment or prevention of disorder. This sequence corresponds to a protein of the invention. (Note: the sequence data for this patent did not form part of the printed specification but was obtained from the EPO in electronic format).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New proteins and protein complexes from eukaryotes, useful as targets drug screening, or in diagnosing or screening for the presence of a disease or disorder, or a predisposition for developing a disease or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Marzioch M, Grann-

Aspergillus fumigatus

Aspergillus

fumigatus essential

gene protein #835

```
consider (e.g. cancer), to prevent or contain containation of an object by A. fumigatus, or to prevent or inhibit formation on a surface of a contain comprising A. fumigatus. The polynucleotides are useful for cexpressing recombinant protein for characterisation, screening or comparism throat or comparing with the pathogenic corganisms invade or reside, for comparing with the DNA sequence of A. CC fumigatus to identify duplicated genes or paralogues having the same or funiquatus to identify duplicated genes or paralogues having the same or similar biochemical activity and/or function, for comparing with DNA sequences of other related or distant pathogenic organisms to identify potential orthologous essential or virulence genes, for selecting and comparing of comparing organisms to identify making oligomers for attachment to a nucleic acid array for examination of expression patterns, for raising anti-protein antibodies, as an conference of expression patterns, for raising anti-protein antibodies, as an expression patterns, for raising anti-protein antibodies, as an conference of elicit immune response, as a reagent in assays designed to quantitatively conference of the protein of the binding cours or to identify inhibitors of the activation of the binding cours or to identify inhibitors of the activation of the binding cours or to identify inhibitors of the activation of the binding cours or to identify inhibitors of the activation of the binding cours or to identify inhibitors of the activation of the protein in biological fluids, as a marker for host risenes in which hardwards or variation and to contain a

CC by A. funigatus, or to prevent or inhibit formation on a surface of a CC by A. funigatus, or to prevent or inhibit formation on a surface of a CC by A. funigatus. The polymucleotides are useful for CC expressing recombinant protein for characterisation, screening or CC therapeutic use, as markers for host tissues in which the pathogenic CC quantisms invade or reside, for comparing with the DNA sequence of A. CC similar blochemical activity and/or function, for comparing with DNA CC similar blochemical activity and/or function, for comparing with DNA CC sequences of other related or distant pathogenic organisms to identify CC potential orthologous essential or virulence genes, for selecting and CC making oligomers for attachment to a nucleic acid array for examination of expression patterns, for raising anti-protein antibodies, as an CC antigen to raise anti-DNA antibodies or to elicit another immune casponse, and for identifying polymucleotides encoding the other protein contraction. The polypeptides may be used to raise antibodies or to elicit immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, as a marker for CC determine levels of the protein in biological fluids, as a marker for CC isolate correlative receptors or ligands in trace as a marker for of Aspergillus fumigatus of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to Pseudomonas aeruginosa polypeptides and the CC polynucleotides encoding them. The sequences are useful in diagnosts and CC therapy of pathological conditions, as molecular targets for diagnostics, CC prophylaxis and treatment of pathological conditions resulting from a CC batterial infection, for evaluating a compound, such as a polypeptide, CC for the ability to bind a P. aeruginosa nucleic acid, as components of CC effective antibacterial targets, as targets for antibacterial drugs, CC including anti-P. aeruginosa drugs, as templates for recombinant CC production of P. aeruginosa drugs, as templates for recombinant CC infection, and in detection of P. aeruginosa sequences or other sequences CC infection, and in detection of P. aeruginosa sequences or other sequences CC feducation, by a companion of P. aeruginosa sequences ABO67826.

CC ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed CC septents users obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL3051), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
Drosophila; dev pharmaceutical.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WO200171042-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cid interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLI6176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57373-ABL901840-ABL16175) and the encoded proteins (ABB57373-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-ABL901840-A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated nucleic acid genes from Drosophila and

Accordingly, these each relative to the corresponding wild type plants. Accordingly, these sequences can also be useful as positive or negative selectable markers sequences can also be useful as positive or negative selectable markers aduring transformation of cells or tissues. The identified genes play a during transformation or cabon metabolism or they function as wall biosynthesis, nitrogen and/or carbon metabolism or they function as wall biosynthesis, nitrogen and/or carbon metabolism or they function as the Effajpe transcription factors. This polypeptide sequence is thale cress protein the Effajpe transcription factor, given in an exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Altering plant characteristics, useful for producing plants for enzyme pharmaceutical production comprises modifying in a plant, expression of one or more nucleic acids and/or modifying level or activity of one or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Inze
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to a novel method for altering one or more plant characteristics. Specifically, it refers to identifying genes that are up characteristics. Specifically, it refers to identifying genes that are up compared to the compared in transgenic plants overexpressing the heterodimeric expanying a transcription factor of Arabidopsis and using these sequences to Right plant characteristics accordingly. The present invention describes alter plant characteristics accordingly. The product invention of growth regulators, generating transgenic plants for the production of growth regulators, where enzymes, therapeutics, pharmaceuticals and animal feed products, where the product of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             N-PSDB; ADN73076.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; SEQ ID NO 972; 134pp; English.
